Abtract

By participated in 'Cooperative Education Student' program, we have joined in IT-support department of BEC-Tero Radio Limited. With cooperative with BEC staffs, we design a project of "Airlink WiFi Aunthentication". This one was designed for management of the wifi network, and edited by Linux Operation System.

We, cooperative education students, collecting data, geting BEC-staffs suggestion. Then edited a computer program and developed it to match organization needs.

Cooperative Education Students have collects data to create a project and present to requests a recommend from staff consultants and once it has been approved for implementation have developed Internet System for to use users management system within the organization to work more efficiently and can to be checking Internet correctly.

Key words : Internet / System / Wireless Network
