Abstract

IT Wireless Network served on Faculty of Medicine Siriraj Hospital Department and installed equipment. This Faculty found some problems from wireless network such as the signal problems checking. It would be delays because of permission in some places. So the developers developed the Survey Wi-Fi's program to solve this problem. Visual Studio C# was used in programing part and Microsoft SQL Server 2008 was used in database part. In conclusion, this program can reduce process of checking signal and make workflow smoothly.
