## ABSTRACT

This purposes of this research were to analyze and design for the transfer grades to students which to develop a system to be able to use it next and reduces the time to implement and facilitate the performance of the staff down. This research collected data from the work of personnel and related documents. Researcher has modeled Entity-Relationship Model and Data Flow Diagram to mediate the understanding between the parties involved, and design of the user interface in performance between users and systems.

The result can found that this analysis and design support to store the subjects from the previous institution, transfer grades individually, individual learning plan and the printing of documents and transfer plans individually.

**Keywords:** Analysis and Design, Grade Transfer
